DETAILED ACTION

Continued Examination Under 37 CFR 1.114

- 1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/18/2010 has been entered.
- 2. Claims 30 43 are pending. Claim 30 is the independent claim. Claims 31 43 are new. Claim 30 is currently amended. Claims 1 29 have been previously cancelled. Claims 30 43 have been rejected by the Examiner.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 30 40, 42, and 43 are rejected under 35 U.S.C. 102(e) as being anticipated by Mathews et al. (US 7,500,198 B2).

As per independent claim 30, Mathews discloses a method for arranging and playing a media presentation, comprising:

- receiving a selection of a plurality of media objects to be included in a media presentation, receiving configuration instructions for ordering the plurality of media objects in the media presentation, and generating a media package comprising the selected media objects in said order (column 3, line 56 column 4, line 14; column 5, lines 9 11; and column 6, lines 39 67);
- identifying a trigger event to be associated with the media package, generating an association list, and associating said trigger event with said media package in said association list (column 4, lines 19 44; column 5, lines 47 65; and column 6, lines 23 38); and
- transmitting the media package and said association list to a wireless communication device for storage on the wireless communication device (column 4, lines 54 59; column 5, line 66 column 6, line 22; and column 6, line 64 column 7, line 3).

As per claim 31, and taking into account the rejection of claim 30, Mathews further discloses that *the trigger event is a call processor event* (column 7, lines 3 – 41).

As per claim 32, and taking into account the rejection of claim 31, Mathews further discloses that the call processor event is a call ended event (column 7, lines 31 - 41).

As per claim 33, and taking into account the rejection of claim 31, Mathews further

discloses that the call processor event is a call dropped event (column 7, lines 31 - 41).

As per claim 34, and taking into account the rejection of claim 31, Mathews further discloses that the call processor event is a call received event (column 7, lines 3-41).

As per claim 35, and taking into account the rejection of claim 34, Mathews further discloses that the call received event is a voice call received event (column 7, lines 3-41).

As per claim 36, and taking into account the rejection of claim 34, Mathews further discloses that the call received event is a paging call received event (column 7, lines 3-41).

As per claim 37, and taking into account the rejection of claim 34, Mathews further discloses that *the call received event is an SMS message received event* (column 5, line 57).

As per claim 38, and taking into account the rejection of claim 34, Mathews further discloses that *the call received event is a text message received event* (column 5, line 57).

As per claim 39, and taking into account the rejection of claim 30, Mathews further discloses that the trigger event is a key press event (column 5, lines 55 - 56).

As per claim 40, and taking into account the rejection of claim 30, Mathews further discloses that the trigger event is a wireless device status event (column 4, lines 21 – 28 and

column 5, lines 50 - 61).

As per claim 42, and taking into account the rejection of claim 40, Mathews further discloses that *the wireless device status event is a no carrier received event* (column 4, lines 25 – 26 and column 5, line 59).

As per claim 43, and taking into account the rejection of claim 30, Mathews further discloses that the trigger event is a position location event (column 4, lines 25 - 26; column 5, line 56; and column 7, lines 56 - 66).

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claim 41 is rejected under 35 U.S.C. 103(a) as being unpatentable over Mathews et al. (US 7,500,198 B2) in view of Hansson (US 6,323,775 B1).

As per claim 41, Mathews sufficiently discloses the limitations of claim 40.

Mathews does not explicitly disclose that the wireless device status event is a low battery condition event.

Nevertheless, in an analogous art, Hansson discloses that a wireless device status event

Art Unit: 2179

may be a low battery condition event (column 1, line 57 – column 2, line 17).

Both Mathews and Hansson pertain to the analogous art of updatable displays of portable communication devices (Mathews, Abstract and Hansson, column 1, lines 7 - 11), and thus one would look to the other for possible variations to their teachings or improvements to overcome particular difficulties of their teachings. In addition, Hansson discloses that "there exists a need to notify the user of a low battery condition in a manner that increases the likelihood that the battery can and will be recharged" (Hansson, column 2, lines 14 - 17). Furthermore, Mathews discloses that "current mobile handsets do not have interfaces or other functionality that dynamically changes based on internal or external triggers related to the mobile handsets" (Mathews, column 1, lines 36 - 39). Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to combine the teachings of Mathews and Hansson, because one would appreciate the ability to use internal or external triggers to notify users of relevant functionality such as the condition of the battery.

Response to Arguments

7. Applicant's arguments filed on 3/18/2010 have been fully considered, but are most in view of new grounds of rejection necessitated by amendment

Conclusion

8. It is noted that any citation to specific, pages, columns, lines, or figures in the prior art references and any interpretation of the references should not be considered to be limiting in any way. A reference is relevant for all it contains and may be relied upon for all that it would have

Application/Control Number: 10/719,317

Art Unit: 2179

reasonably suggested to one having ordinary skill in the art. In re Heck, 699 F.2d 1331, 1332-33,216 USPQ 1038, 1039 (Fed. Cir. 1983) (quoting In re Lemelson, 397 F.2d 1006,1009, 158 USPQ 275, 277 (CCPA 1968)).

10. Any inquiry concerning this communication or earlier communications from the

Examiner should be directed to Eric A. Wiener whose telephone number is 571-270-1401 and

whose fax number is 571-270-2401. The Examiner can normally be reached during regular

Office business hours, Monday through Thursday.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's

supervisor, Weilun Lo, can be reached on 571-272-4847. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
